

TEJAS SOLANKI

AI Engineer | Software Developer | AI/ML Developer

ITM Skills University '28 | tejassolanki176@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

AI Engineer and Software Developer building production-ready applications in computer vision, automation, and applied machine learning. Experienced across Python and the MERN stack, with end-to-end ownership from backend architecture and REST API design through deployment. Actively expanding into Generative AI, LLMs, and prompt engineering to ship intelligent, automation-driven products.

EXPERIENCE

8bits Technologies – Software Developer Intern April 2026 - Present, Sept 2025 - Dec 2025

- Engineered GUI automation solutions for Windows desktop applications in Python using the pywinauto library, streamlining repetitive client workflows
- Designed and shipped custom automation scripts that reduced manual work and improved operational efficiency across client projects, applying strong software engineering and debugging practices

LetsUpgrade – EdTech Platform Intern Dec 2024 - Jan 2025

- Gained hands-on exposure to EdTech platform development, contributing to user engagement strategies and feature planning
 - Applied platform design principles, technology integration, and scalability considerations to support product development decisions
-

TECHNICAL SKILLS

AI / Machine Learning: Computer Vision, OpenCV, MediaPipe, Face Recognition, Applied Machine Learning, Deep Learning (exploring), Generative AI & LLMs (exploring)

Tools & Concepts: pywinauto, pynput, Git/GitHub, DSA, System Design, Automation

Programming Languages: Python, Java, C++

Backend: Node.js, Express.js, Python, Flask, REST APIs, API Integrations

Database: MySQL, MongoDB

Frontend: HTML, CSS, JavaScript, React.js, Next.js

ACHIEVEMENTS

- Winner – IMAGINE Hackathon (PIWOT 2025), a national-level hackathon organized by PanIIT Alumni India | Prize: ₹50,000
 - Winner – ITM Buildathon 3.0, the college's flagship hackathon | Prize: ₹7,000
 - Recognized as Hackathon Champion by ITM Group of Institutions for consistent hackathon performance
-

PROJECTS

Gesture-Controlled Combat – AI-Powered Gaming

Built a real-time gesture-recognition system enabling controller-free gameplay of Street Fighter IV using live body-movement tracking. Combined MediaPipe pose tracking with OpenCV frame processing for low-latency computer vision inference, then mapped gestures to in-game actions using pynput.

SaveState – AI-Powered Attendance Automation

Developed an AI-based attendance platform using **Next.js** and a **Python Flask** backend to eliminate proxy attendance through facial recognition. Implemented **128-D face embedding** verification using **dlib's ResNet-34** model (**3M+ training faces, 99.38% benchmark accuracy**) with a **0.45 matching threshold** and optimized runtime with **320px frame downscaling** and memory management for stable deployment.

SecureExam Lite – EdTech

Built a browser-based AI proctoring tool using Flask, MediaPipe, and computer vision for real-time exam monitoring. Implemented selfie-based identity authentication and continuous face-activity tracking to detect and flag suspicious exam behavior.
